# HEADWAY Guitars Since 1977

**Headway**<sup>®</sup>  
GUITARS

Headway started up in 1977 as a quest for second-to-none quality and world-class tone. Headway's experience in guitar making prides itself in detailed and precise craftsmanship and a keen eye for the finest selection of material. Today Headway offers a wide range of guitars from boutique customshop guitar sought after by collectors to affordable yet quality guitars for entry level players. This product catalogue introduces our various lineup.

# Customshop Builders

Headway Customshop builders build order-made guitars and special one-off models on which the builder's own ideas are incorporated into.

## YASUO MOMOSE 百瀬恭夫

Momose Yasuo has been the chief builder of Headway since its establishment in 1977. He developed numbers of methods in acoustic guitar building through his long career and have been acclaimed as master builder in the guitar industry of Japan.

## MASATO YASUI 安井雅人

Yasui Masato spent many years supporting Momose for the building of customshop acoustic guitars since he entered Headway team in 2002. He was assigned to the leader of Aska Team Build line in 2011 and started taking more important role at the workshop. In 2016, he finally started the career as customshop builder.

## ASKA Team Build series

Aska Team Build guitars are built by a team of the most experienced luthiers at our Aska workshop. They are built in the same way Momose developed in his careers and with the highest quality materials and parts. ATB line often releases limited models built with rare exotic materials and/or intricate inlay works. Such limited models have unique design that is mostly concerned with Japanese traditional culture.

## Important Features of ATB models

### Original Dovetail joint.

The dovetail joint greatly contributes to tone of an acoustic guitar and makes a guitar responsive and powerful. On our neck, the V shaped mortise is designed bigger compared to general dovetail joint and so that neck is very tightly inserted into body. This construction increases strength of the joint section and the guitar sounds and responds as if it is made of a single solid piece of tonewood.

### Post-coating Neck Joint

While majority of acoustic guitar manufacturers finish their acoustic guitar after neck is jointed with body, we finish neck and body separately before they are put up together. There are two reasons why we do it. Firstly this way makes the neck joint beautifully done without a pool of coating material. Secondly it shows how precisely and tightly neck is jointed with body because joint section is not covered with coating nor painting.

## STANDARD series

Standard series also features dovetail neck joint and all solid tonewoods as well as ATB series does. Headway's original aluminum channel inserted in neck increases durability. Most of the standard models are build with forward-shifted scalloped bracing so that the guitar is resonant from brand-new condition.

## *JT* Japan Tune-up series

Headway Japan Tune-up series is a new cost performance line introduced in 2016. Literally every single guitar of JT series is carefully tuned up at our workshop in Japan to deliver Headway's quality at more budget friendly prices.

## Features

---

### **-Rounded Fret Edges**

Every fret is rounded by hand of builders to increase playability as well as beauty. One can move left hand smoothly on the fingerboard without being disturbed by edges. The edges of nut and saddle are also rounded.

### **-Low action**

JT guitars are set in moderately low action. It is important that an acoustic guitar's action is not too high especially for an entry-level to mid class player. Height of saddle and strong slots of nut are carefully adjusted.

### **-Elixir Strings**

We selected elixir nanoweb light gauge strings as the factory default strings of JT series.

Osamuraikan has become one of the most popular solo acoustic guitarists in online communities of Japan and some Asian countries with number of videos uploaded onto his own Youtube channel. In 2016, the total views of his YouTube channel reached 60 millions. Headway and Osamuraikan teamed up and developed HJ-OSAMURAIKAN in 2016 with a focus on ease of playing. He was aware ease of playing is very important especially for entry class players through communication with his young fans who hope to improve skills of acoustic guitars. Many of them quit playing the guitars due to the difficulty of holding strings. This is why he wanted to make his signature model easy to play on. Various efforts are made in order to realize his idea. The guitar is strung with extra light strings and set in the lowest possible action.

The design of HJ-OSAMURAIKAN is based on Customshop HJ-523, the acoustic guitar he has exclusively been playing with it for more than 10 years.
